Exchange and Industry Sponsored Webinars are presented by unaffiliated third parties. Interactive Brokers LLC is not responsible for the content of these presentations. You should review the contents of each presentation and make your own judgment as to whether the content is appropriate for you. Interactive Brokers LLC does not provide recommendations or advice. This presentation is not an advertisement or solicitation for new customers. It is intended only as an educational presentation.

Disclosure:

Options involve risk and are not suitable for all investors. For information on the uses and risks of options, you can obtain a copy of the Options Clearing Corporation risk disclosure document titled [Characteristics and Risks of Standardized Options](#) by calling (312) 542-6901.

Futures are not suitable for all investors. The amount you may lose may be greater than your initial investment. Before trading futures, please read the [CFTC Risk Disclosure](#). For a copy visit interactivebrokers.com.

Security futures involve a high degree of risk and are not suitable for all investors. The amount you may lose may be greater than your initial investment. Before trading security futures, please read the [Security Futures Risk Disclosure Statement](#). For a copy visit Interactivebrokers.com.

There is a substantial risk of loss in foreign exchange trading. The settlement date of foreign exchange trades can vary due to time zone differences and bank holidays. When trading across foreign exchange markets, this may necessitate borrowing funds to settle foreign exchange trades. The interest rate on borrowed funds must be considered when computing the cost of trades across multiple markets.

The Order types available through Interactive Brokers LLC's Trader Workstation are designed to help you limit your loss and/or lock in a profit. Market conditions and other factors may affect execution. In general, orders guarantee a fill or guarantee a price, but not both. In extreme market conditions, an order may either be executed at a different price than anticipated or may not be filled in the marketplace.

There is a substantial risk of loss in trading futures and options. Past performance is not indicative of future results.

Any stock, options or futures symbols displayed are for illustrative purposes only and are not intended to portray recommendations.

About

Drawing Capital is an innovation-focused investment platform headquartered in Silicon Valley, CA.

Drawing Capital aims to capture the expansion of a technology-forward world by investing in leaders that we believe carry undervalued growth. Our expertise in finance and data science enables us to participate in investment opportunities in public markets not captured by passive investing.

Company Comps & Key Metrics

Allocating to the Opportunity

Summary & Resources

Background & Historical Context

- In 2020 alone, 64.2 ZB of data was either created or replicated, which is equivalent of 500+ billion iPhone 13s.
- There is a secular mega-trend in Big Data, AI and ML, and Automation.

Growth in Data Volume Over Time is Creating Large Opportunities for Founders & Investors

Growth in Web Searches for the term “Data Analytics” Demonstrates Increasing Social Popularity in Data Analytics

More Data Positively Impacts Businesses

1

Allows companies to observe, manage, and generate insights from data to **improve customer experiences**, leading to increases in **revenues, customer retention, and better product quality**.

2

Enables **winner-take-most environment** through asymmetric information, increasing returns to scale, and platform-level technological advantages.

3

Promotes **positive network effects** by improving the product or service for all existing and new customers as the company gains more customers.

These Technologies Have Been Around For Decades

1950

The term "machine learning" is coined.

1983

IBM releases DB2 database management system using SQL.

1960

First neural networks applied to real-world problems (MADALINE).

1989

First use of the term "Big Data" used by Erik Larson in Harpers Magazine.

Why Now?

Previous Bottlenecks Prevented Acceleration of These Trends, and Today, Many of These Roadblocks Have Been Reduced or Eliminated

1

Low-quantity,
low-quality data

2

Cost-prohibitive
infrastructure

3

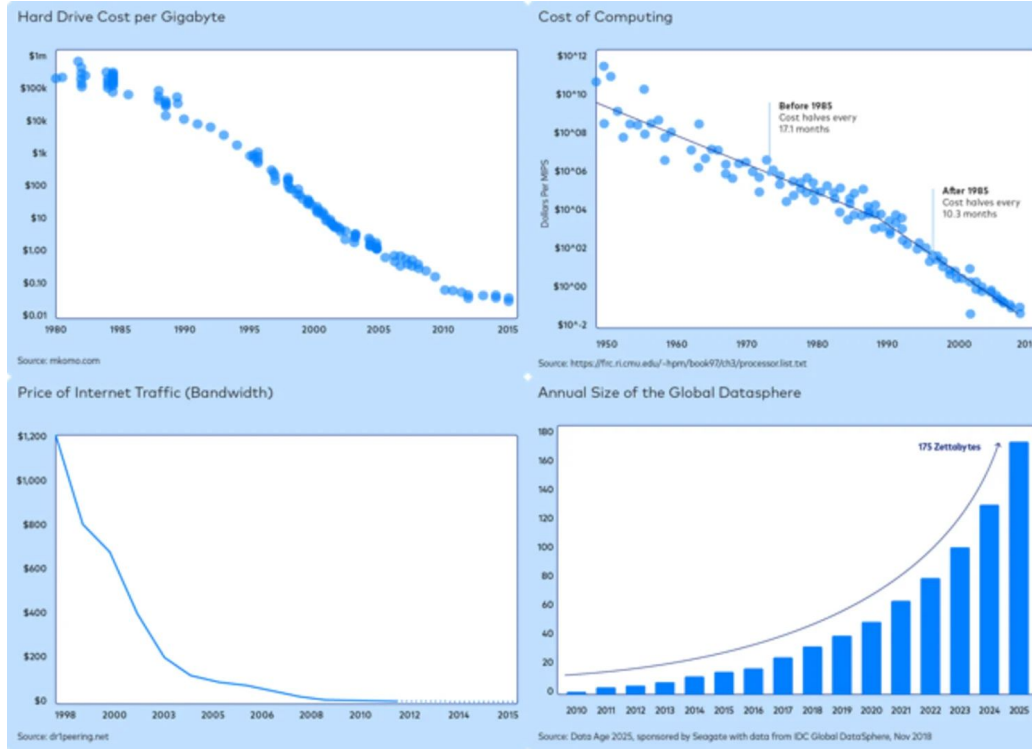

Large teams of
technical experts

4

Inefficient collection
and processing

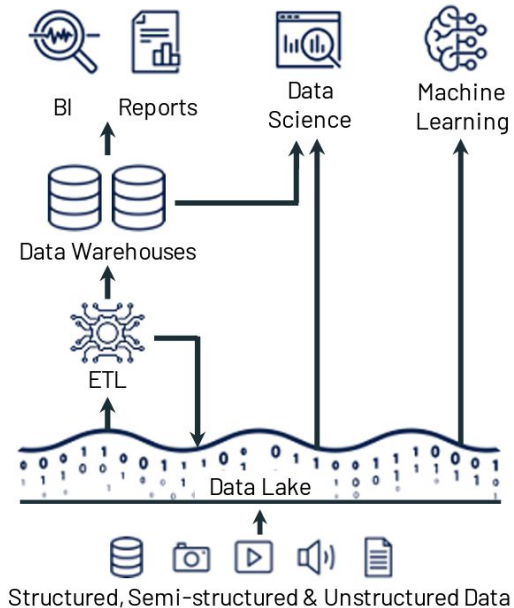

Technology Trends Toward Cloud Data Integration

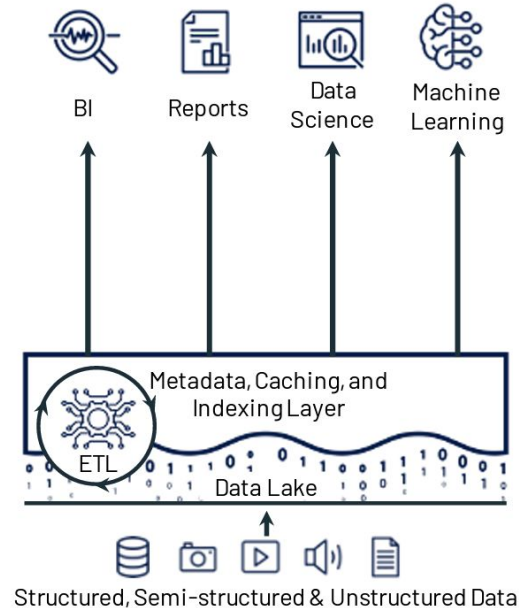

Unlocking Efficiency: Data Warehouses, Data Lakes, & Data Lakehouses

(a) First-generation platforms.

(b) Current two-tier architectures.

(c) Lakehouse platforms.

Data Warehouses, Lakes, and Lakehouses Lead To Widespread Benefits

1

Increased expansion of **total addressable markets**.

> new solutions and new entrants

2

Enablement of **new tools and services**.

> gave rise to the modern data stack

3

Increased **value-to-time** for market participants.

> scalability of infrastructure

Data Science Hierarchy of Needs

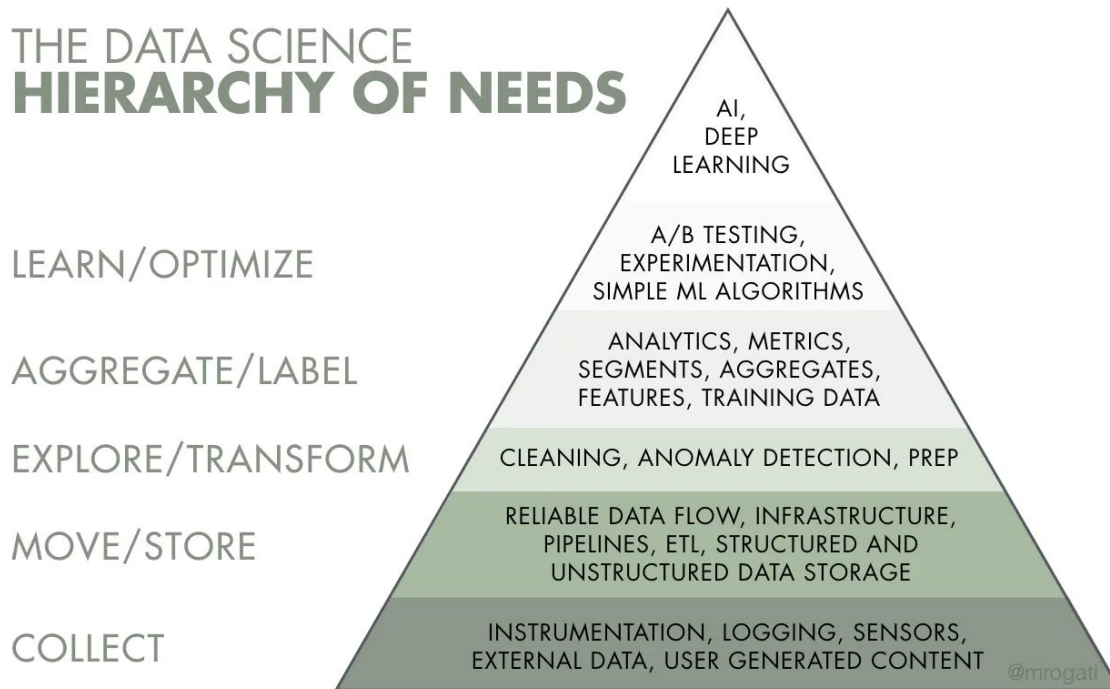

- Many companies want to implement AI or data science, but aren't ready.
- The Hierarchy of Needs lays out a roadmap for that implementation.
- The modern data stack involves cloud-enabled software infrastructure, analytics, and programmatic insights.

Self-actualization is great. But first, you need food, shelter, and water.
Data literacy, collection, and infrastructure.

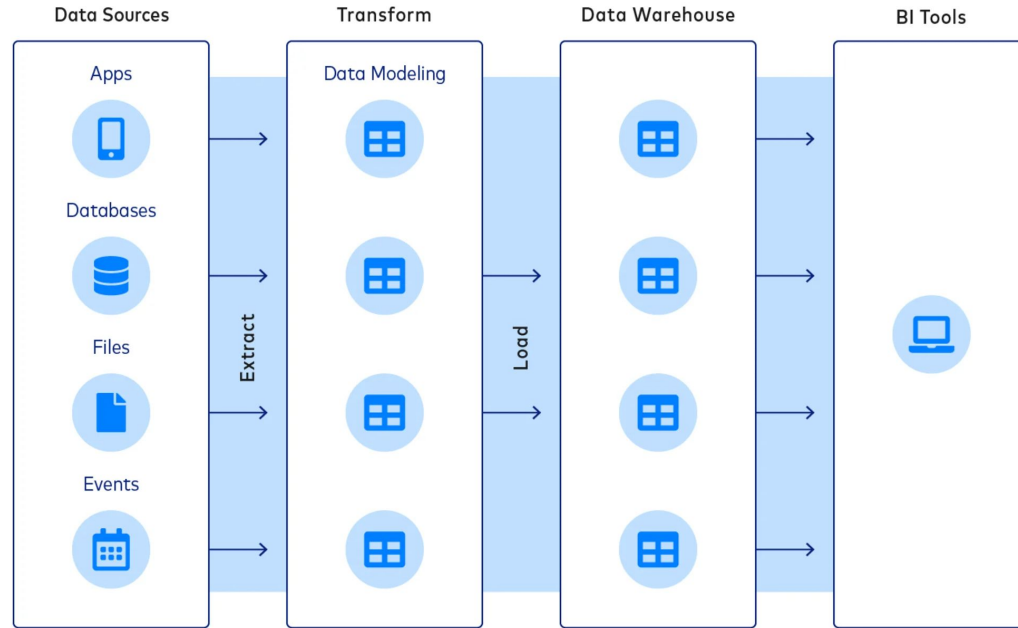

- Monica Rogati

The Data Science Hierarchy of Needs

ETL

2nd Layer Innovations: ETL vs. ELT

ELT

The Modern Data Stack & Categorization of Software Companies

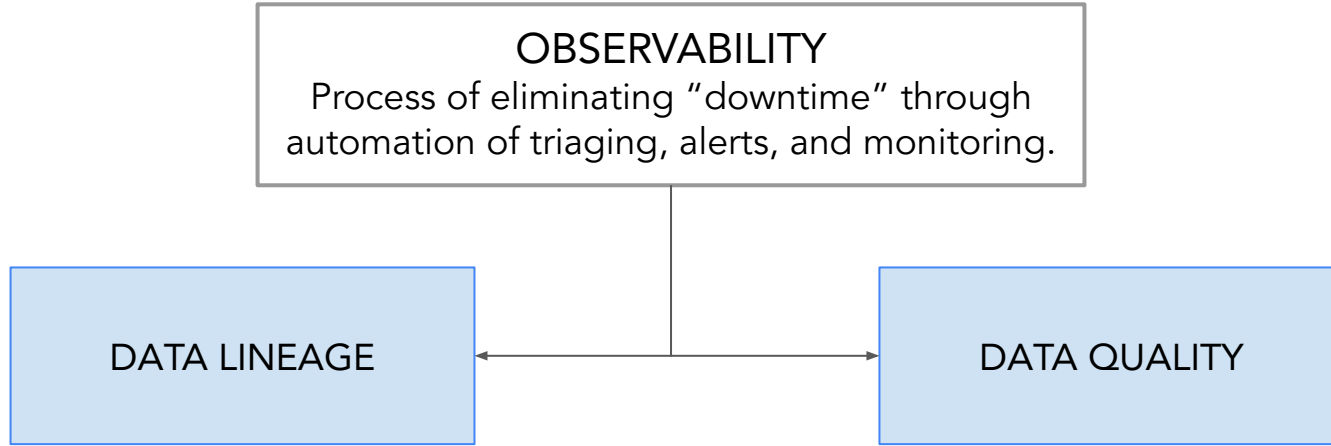

Innovation in Data Infrastructure

- In the first half of 2021, \$31 billion was invested into AI-focused startups and 42 artificial intelligence companies reached \$1B+ valuations.
- Innovation highlights: Data Observability, Real-Time Analytics, and Data Mesh.

Data Observability

Historical Performance of Data Observability Stocks

IV

Company Comps & Key Metrics

- Corporate budgets towards software continue to increase from 4.9% in 2021 to 5.2% in 2022, according to CIO surveys.
- These increases are notable given that 2021 had already seen a ~6% upward revision.
- We discuss leading software companies' multiples, growth, margins, and other financial metrics.

Software Industry is Becoming a Greater % Share of the S&P 500 Index

Source: WisdomTree. As of 6/30/2021. Subject to change

¹The weight of the Software & Services industry within the S&P 500 Index is currently 13.5% of the index's total weight. You cannot invest directly in an index.

6 Key Metrics for Software Companies

(not exhaustive)

Revenue Growth Rate = $(\text{Revenue in T2} / \text{Revenue in T1}) - 1$

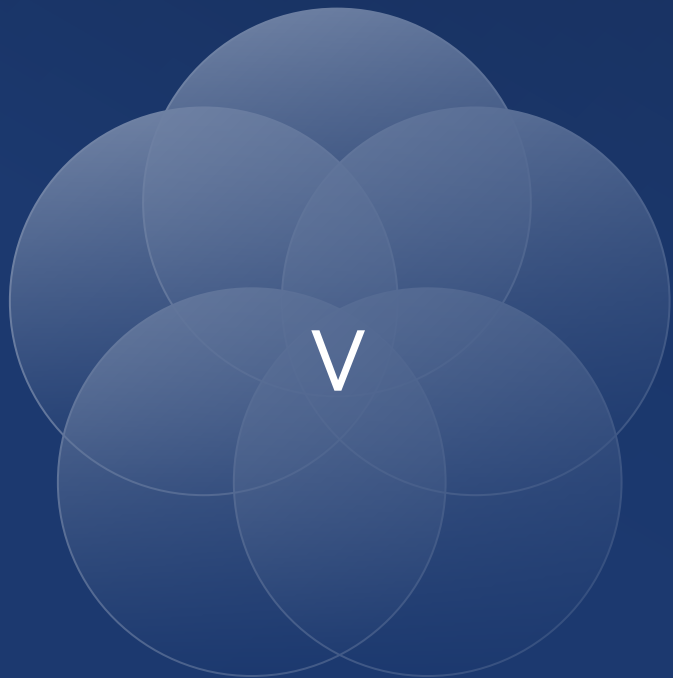

Gross Margin = $(\text{Revenue} - \text{COGS}) / \text{Revenue}$

Growth Endurance = $(\text{T1 Revenue Growth Rate}) / (\text{T0 Revenue Growth Rate})$

Net Dollar Retention = $\text{Cohort Value Today} / \text{Cohort Value Last Year}$

Rule of 40 = $\text{Revenue Growth Rate} + \text{FCF Margin}$

Contribution Margin = $(\text{Revenue} - \text{Variable Costs}) / \text{Revenue}$

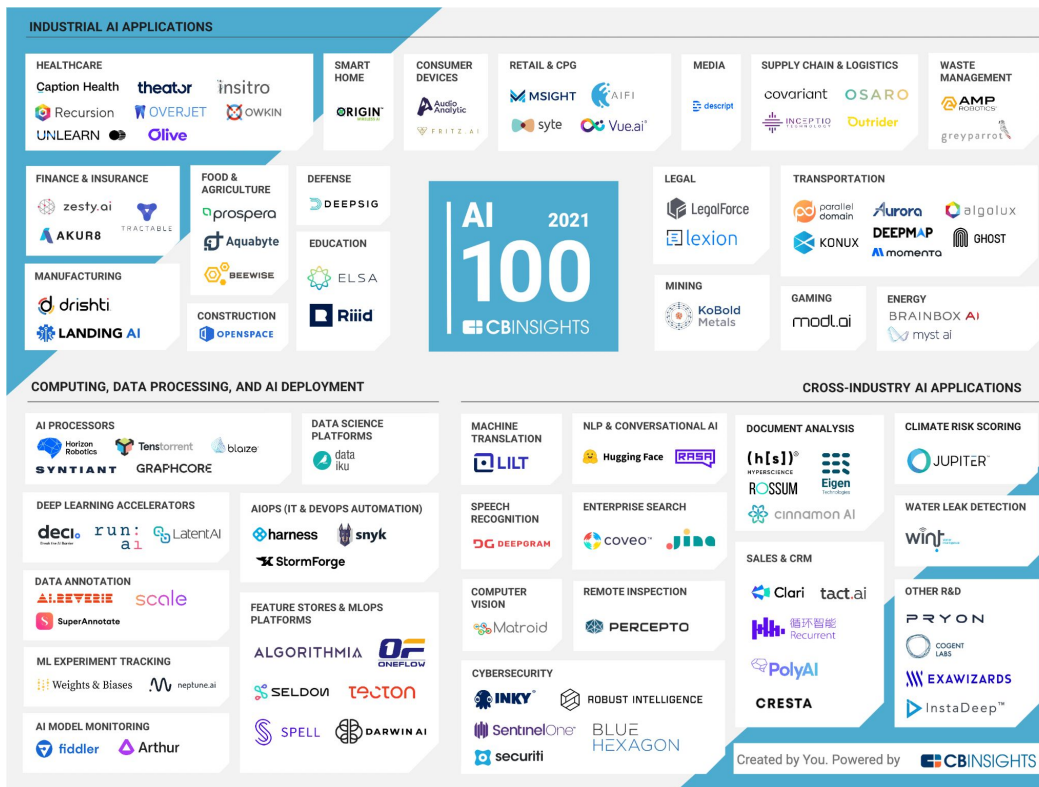

Allocating to the Opportunity

- There are several ways to gain access to Data companies' stock depending on risk tolerance, time horizon, and expertise (e.g. individual stocks, ETFs, private funds, or venture platforms).
- The opportunity & landscape are vast, and much of the opportunity for wealth creation is in private markets.

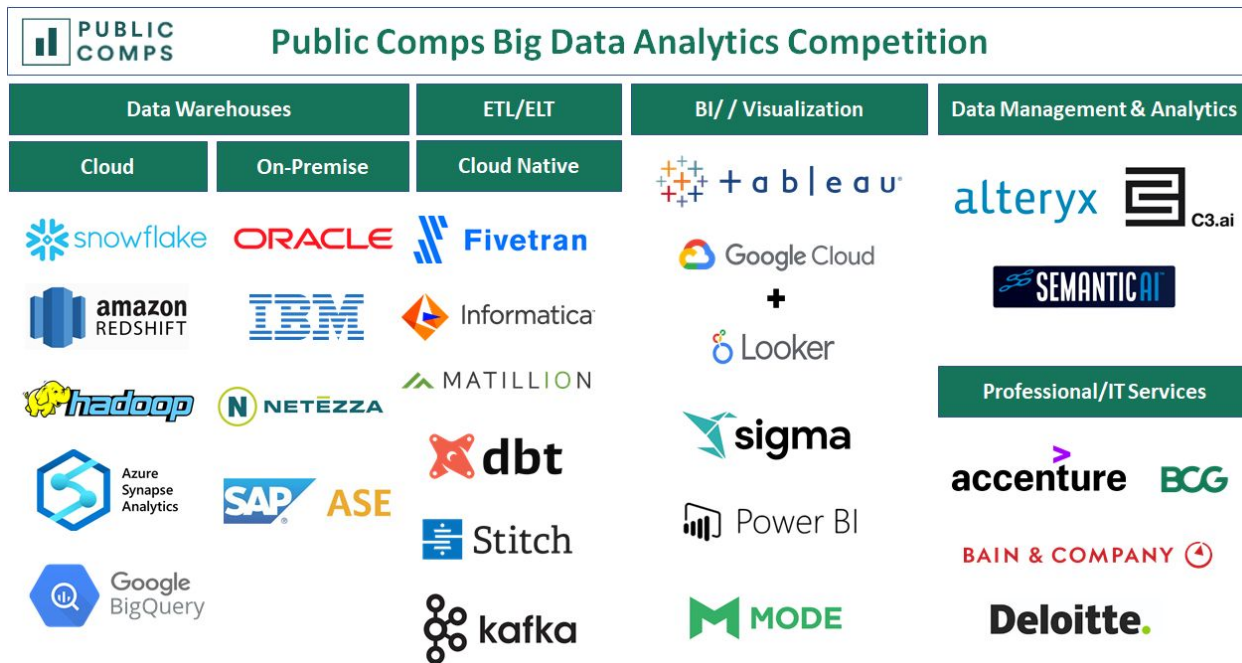

Artificial Intelligence Landscape

Summary

1

As every company not only becomes a software company, but a data company, category-leading businesses in the modern data stack and data science hierarchy will represent a tremendous opportunity for wealth creation.

2

As many of the fastest-growing data infrastructure companies are still private, inclusion of venture capital as an asset class will be essential for achieving above-market returns in the years to come.

3

Declining costs for data storage and cloud computing, coupled with the exponential growth of available data, will provide significant tailwinds for cloud-based data companies.

4

While the health and growth of a business is important, money is made and lost on the entry and exit of positions. It is important to have a tested investment framework that incorporates key metrics for software companies (e.g. Gross Margin, Contribution Margin, Net Dollar Retention, and Rule of 40).

5

Artificial Intelligence is frequently used as a buzzword by companies. Many companies are often not ready to implement AI or other data science practices. Adhering to the Data Science Hierarchy of Needs is a great way to de-risk the implementation of new technologies and drive long-term success of data analytics.
